

DEUTERATED PRODUCTS

HEAVY-DEUTY CHEMISTRY

The Acros Organics brand offers a broad range of high quality deuterated products for all your routine synthesis and structural analysis needs. The products include solvents, building blocks, reagents, and standards in a variety of packaging options, isotopic enrichment, and tetramethylsilane concentrations.

DEUTERATED NMR SOLVENTS

Acros Organics is the preferred brand for deuterated NMR solvents worldwide.

- **ISOTOPIC ENRICHMENT:** Ranges from 97 atom % D for routine use to 99.97 atom % D for the most demanding applications
- **TETRAMETHYLSILANE CONCENTRATION:** In addition to deuterated solvents without any internal standards, we also offer a broad range of solvents that contain either 0.03% v/v or 1% v/v tetramethylsilane (TMS) as an internal standard
- **PACKAGING OPTIONS:** From regular bottles to ampules in three sizes (0.5, 0.75, and 1 mL)
- **RELATED PRODUCTS:** Our selection of lanthanide shift reagents (LSRs) complements our collection of deuterated solvents to help you differentiate between NMR signals of similar chemical shift

DEUTERATED BUILDING BLOCKS

The Acros Organics expanded offering of high quality deuterium labeled building blocks and reagents makes the synthesis of more complex isotopic tracers more accessible and affordable.

- **ISOTOPIC ENRICHMENT:** 97 atom % D to 99.5 atom % D
- **BROADENING RANGE OF REAGENTS:** acids & bases, alkylation & acylation reagents, and reducing agents

Refer to the facing page for a quick reference of our most frequently used deuterated NMR solvents. The complete deuterated solvents, building blocks, and reagents offering follows, arranged by application for your convenience.

DID YOU KNOW?

Acros Organics a leading brand of organic and fine chemicals, is highly focused on the evolving trends in organic chemistry. The Acros Organics brand supports research, development, and production activities through a broad range of off-the-shelf products and expertise in sourcing and manufacturing. The product lines consist of three key elements: Building Blocks, Essentials and Functional Reagents.

- **BUILDING BLOCKS** – an extensive range to construct more complex molecules
- **ESSENTIALS** – more than 1,000 basic reagents
- **FUNCTIONAL REAGENTS** – “tools” to transform starting materials into products

There is also an extensive range of heterocyclic building blocks available from Maybridge Chemicals.
